PROFILE

Senior software engineer with 11+ years experience across Platform, SRE, DevEx, DevOps, and SWE roles. Passionate designer/builder/deliverer/optimizer of workflow accelerating systems and org-wide collaboration.

SKILLS

- Go | Python | Bash | TypeScript | Temporal | gRPC | SPIFFE/SPIRE | GraphQL | PostgreSQL | MySQL
- AWS | Kubernetes | Docker | ArgoCD | Helm | FluxCD | Terraform | Github+Gitlab CI | DataDog | Splunk
- Project Ownership | AI | Systems Architecture | Monitoring/Alerting Systems | Mentoring | Automation

EXPERIENCE

Senior DevOps Engineer, Fortune 500 Company - EverOps *San Francisco, CA* **Jun 2025 - Present**

- Technical lead on 2 AI vendor POCs, partnering with 40+ cross-functional stakeholders across strategy, eng, security, and compliance; drove AI solutions and adoption that reduced costs by \$300k annually.
- Architected a self-service Go/Temporal AWS-centric chaos engineering framework to enable IT and product engineers to proactively harden 20+ services, reducing MTTR by 40% and MTTD by 60%.
- Reduced developer friction in regulated environments by automating compliance-as-code across 140+ AWS accounts with Terraform workspaces, saving 160+ hours of manual toil per annual audit cycle.
- Project Owner of self-hosted Splunk Enterprise (~170 users, ~300GB/day, 15TB retained), including upgrades, runbooks, monitors/alerts, and realtime dashboards that drive org-wide, data-driven decisions.
- Engineered multi-platform audit log pipelines across Slack, AWS, and EKS (Golang) that produced the secure self-service observability tools used by security, legal, and eng for global regulatory compliance.

Senior Software Engineer, Platform Team - OpsLevel *Toronto, ON* **Jul 2023 - Jan 2025**

- Pioneered conversion of Terraform provider to latest framework by writing flagship Go code that served as a guide for junior devs; upgraded provider boosted customer adoption by 65% and Q2 sales by 30%.
- Automated Go API client development by designing self-generating code, saving 100+ dev work hours.
- Built first AWS single-tenant via Terraform and Kubernetes, novel business offering shipped in 2 weeks.
- Executed 15 Kubernetes cluster upgrades and added Network Policies to enhance infrastructure security.

Software Engineer, Developer Productivity - dbt Labs *Philadelphia, PA* **Nov 2022 - May 2023**

- Optimized critical deployment pipelines by refactoring GitHub Action workflow that modified ArgoCD Helm chart values; reduced deployment cycle time by 83% (12m → 2m) across 1000+ microservices.
- Engineered Go CLI tool to standardize, report usage/drift, and manage local developer tooling versioning org-wide, significantly reducing inter-project bugs and improving cross-team cohesion.
- Averted a global CI/CD crisis by developing rapid automation (gh cli, bash, awk) to upgrade deprecated GitHub Actions dependencies across 400+ repositories ahead of Node 12 end-of-support deadline.

EXPERIENCE

Software Engineer - Lawrence Livermore National Laboratory *Livermore, CA* **May 2018 - Nov 2022**

- Led lab-wide upgrades ahead of Python 2.7 end-of-life deadline by upgrading critical workflow code bases, documenting the upgrade process, and delivering two technical talks to the lab's 100+ employees.
- Developed Python script to visualize 15+ years of unstructured physics data into metrics on compiler performance across simulations, insights informed better compiler usage reducing runtimes by 20%.
- Architected and published Saloon, LLNL's open-source Vim plugin that provided real-time linting, formatting, and diagnostics for scientists and engineers working on remote servers; Saloon filled the gap where modern IDEs were restricted, improving code quality across multiple physics simulation projects.

Software Engineer - Workday *Pleasanton, CA* **Jul 2015 - May 2018**

- Developed Drupal/MySQL script that migrated 2.5M+ database records, including 120K active users, 4K organizations, 80K media files, during Drupal 6 to Drupal 8 major website upgrade.
- Expedited PHPUnit test development via Behat scripts, generated code resulted in 30% faster releases.
- Automated test development with Drupal's PHPUnit based testing framework and behat for UI testing via a templating engine, boosting developer throughput by 20%.

Technical Sergeant - US Air Force *Travis AFB, CA* **Nov 2007 - Nov 2017**

- Served 6 years in the USAF Reserve as a Lead QA evaluator at the Wing/base level, on the Wing Inspection Team, as a squadron Vehicle Control Officer, and Airfield Driving Program Manager.
- Served 4 years in Active Duty as a Missile Maintainer that inspected and repaired 100+ active ICBMs.

PROJECTS / AWARDS

EasyEPR, iOS app **Feb 2017 - Dec 2023**

- Independently developed and published Easy EPR which helped thousands of enlisted U.S. Air Force members write their annual Enlisted Performance Reports (EPR) as part of their promotion package.

IDEA Award (US Air Force) **Jan 2017 - Mar 2017**

- EasyEPR improved the process of writing annual Enlisted Performance Reports for thousands across the Air Force, leading to my receiving the Innovative Development through Employee Awareness Award.

EDUCATION

California State University, East Bay *Hayward, CA* **Jun 2015**

B.S. Computer Science and Applied Mathematics

Community College of the Air Force *Travis AFB, CA* **Jan 2016**

A.S. Air Transportation

Community College of the Air Force *Malmstrom AFB, MT* **Oct 2011**

A.S. Missile and Space Systems Maintenance
